(54) VIDEO RECORDING RESERVING DEVICE FOR VTR

(57)Abstract:

PURPOSE: To obtain a reservation device for a VTR capable of easily performing an operation as to the reservation of a broadcast performed at the same time as that of a reservation information inputted in the past.

CONSTITUTION: In the case of inputting a new reservation information, the reservation information of a video recording reservation is inputted by an operation part 103. The reservation information inputted by the operation part 103 is set in a reserved video recording control circuit 101 and a storage circuit 102. In the case of inputting the same reservation information as a reservation information inputted in the past, when a reservation information stored in the storage circuit 102 is selected by the operation part 103, the reservation information is set in the reserved video recording control circuit 101 by a control signal from a system control circuit 11. The reserved video recording control circuit 11 eliminates a reservation information whose reserved video recording operation is completed, however, since the storage circuit 102 keeps storing the reservation info recording operation is completed, the video recording res inputtings of more than two times of the same reservation whose operation is easy is obtained.
